Sub:- Approval of Industrial Project in Pellet Plant

TO WHOMSOEVER IT MAY CONCERN

This is to certify that,

1. Prajyot Pinjari

2. Suraj Todkar

3. Diptesh Gharat

4. Onkar Ingale,

From Vishwanekatan College of Engineering, to complete their final year Industrial project in ARCL's Pellet Plant on topic "Vertical Rolling Mill grinding oil leakage reduction", under the industrial guidance of Mr. Sharad Thakur.

For Amba River Coke Ltd.

(Contact details- darpangharat@arcl.in & extension no- 02143-256800)

Sounds Like Celebration

TO WHOMSOEVER IT MAY CONCERN

Date: August 18, 2020

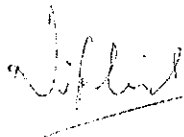

This is to certify that **Saransh Yogendra Sachan**, has successfully completed his **Marketing** internship with **Echobird Electronics LLP** for the period of 1 month. Starting from **14 July 2020** to **14 August 2020**.

During the course of internship. **Saransh Yogendra Sachan** has shown great amount of responsibility, sincerity, and a genuine willingness to learn and zeal to take on new assignments & challenges. In particular, his coordination skills and communication skills are par excellence and his attention to details is impressive.

We wish him all the very best for his future.

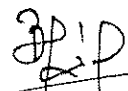

With regards,

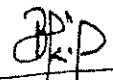

Team Macjack

Chapter 1. Introduction to Industry

1.1 Introduction to JSW Steel

JSW Dolvi Works is India's first to adopt a combination of Co-narc Technology for both steel-making and compact strip production (CSP), aiding the production of hot rolled coils. From automotive and industrial to consumer durable s, Dolvi manufactures products that meet the needs of companies across sectors. The 5 MTPA integrated steel plant at Dolvi is advantageously located on the West coast of Maharashtra. It is connected to a jetty which can handle cargo of up to 15 MTPA. Conveyor belt used has been manufactured by METSO company. Metso provides world leading products and services built on technological excellence, experience and high safety standards. Company is supported by a global network of over 15000 professionals in more than 50 countries. Pulley used has been manufactured by UTTAM GALVA STEELS LTD company. Uttam Galva Steels Ltd is one of the largest manufacturers cold rolled steel (CR) and galvanized steel (GP) in Western India. The company procures hot rolled steel and processes it into CR and further into GP and colour-coated coils. Uttam Galva group also runs two more plants in India:-Uttam Galva Metallic s Limited and Uttam Value Steels Limited.

1.1 Introduction to Pellet plant

Pelletizing is a process which involves mixing of very finely ground particles of iron ore fines having a size which is less than 200 mesh (0.074 mm) with additives like bentonite and then shaping them into near oval/spherical balls having size in the range of 8 mm to 16 mm in diameter by a pelletizer and hardening the balls by firing with a fuel. It is an agglomerating process of converting iron ore fines into 'uniformed sized iron ore pellets' which can be charged directly into a blast furnace (BF) or into a vertical furnace or rotary kiln normally used for the production of direct reduced iron (DRI). The iron ore pellets are shown in Fig 1.

The typical properties of the iron ore pellets are given below

Typical properties of iron ore pellets		Chemical analysis(on dry basis)		Unit	Value	Tolerance
Fe%	65	Minimum	FeO%	0.3	Maximum	SiO ₂ + Al ₂ O ₃ %
				5	Maximum	CaO%
				0.03	±	
				0.01	MgO%	0.06±
				0.01	Basicity%	65
				Maximum	Phosphorus%	0.05
				Maximum	Physical

Abstract

The purpose of this project was focused on designing of the best suspension system for the half car model that can provide maximum ride comfort and handling by maintaining vehicles well isolated from road disturbances, bumps and within an acceptable deflection limit by controlling the suspension force to observe or dissipate the energy appropriately. The mathematical modeling of half car for the passive and active suspension system model had been derived. The road disturbances in this project will be simulated by an impulse input. In order to improve the output responses of the system, a state-feedback controller is selected as a fulfillment of this project. To achieve a better simulation, the controller needs to be carefully designed as each system had its own performance and methods. The state-feedback is selected as a controller and the parameters are optimized by Artificial Bee Colony (ABC) Algorithm. MATLAB Simulink will be used in order to simulate the response of the system and to obtain the ride performances between the suspension system using state- feedback controller and the suspension that apply same controller that optimize by ABC algorithm. The acceleration and displacement become the output for this system and the result was analyzed.

INTRODUCTION:

Nowadays, car is the most important transportation that have been used among people travel from one destination to another. Car production is also increase progressively to the necessities and requirements of consumers. Designing and modeling of car by the factory is different which produced to make sure it fulfills the requirements of consumers based on road handling, load carrying and their passengers' comfort due to conflicting demands. On the other hand, the significance of car suspension systems cannot be emphasized. This is because, it provides a good road holding in order to optimize passengers comfort and maintaining continuously the tires friction between the road surface. It also provides support to the car and equally ensures perfect comfort for the passengers.

1.1 Motivation

It is well known that comfort is one of the key criteria in the structure of a car suspension system. The aim of the car suspension system is to reduce a movement of the car body generated by the surface of road, to protect car body and also to keep the car passenger and for car handling. The suspension system affects the control of the car by both the driver and the comfort of the passenger. The spring makes the tires to move up and withstand bumps on the road, while the dampers avoid bouncing up and down. The car suspension system varies depending on the manufacturer, helping to ensure a wide range of models. The primary role of a suspension system is to ensure the safety function in whatever solution is adopted. One of an important elements in a car is the shock absorber or called as damper, the one which contributes both to driving safety and comfort. It is a device that, through some kind of process known as dampening, controls unneeded spring motion. The shock absorber purpose is to minimize and limit the impact of vibrational motion by transforming kinetic energy to heat energy which can be transferred through hydraulic fluid. The production of car dampers, or shock absorber, is difficult to estimate with precision, as the car's demand increases the existence of shock absorber. The modifications were achieved by making electronic control appropriate for the suspension system to create the best performances. Because of the roll and pitches involved with car and the various roughness of roads the need for dampers increases. So, there was terrific production of the dampers these days.

5.1 Conclusion:

In MATLAB software simulation was used to realize the suspension system. The controller is initially designed on the basis of mathematical modeling as discussed in Chapter 3. Once the optimal controller parameters are determined the diagram of Simulink block will be linked. The Simulink has been designed in MATLAB software by the Simulink model window. The design of the half car model suspension system supposes will perform with state-feedback controller. From research, Simulation result shows that the ABC algorithm optimizations provide a significant improvement to system compared to the conventional system. It is necessary to get the desired rise time, peak time, and control problem settling system time. Choosing the best way to conduct a controller is important because it will provide a desired response of the system.

The theory of the car suspension system was understood and analyzed using a half-car model. The half car suspension system can be simulated based on mathematical modelling followed by the controller tuning process which is state feedback controller. The performance of the half car suspension system between Artificial Bee Colony (ABC) algorithm was compared with conventional state feedback controller. The controller was created by simulation using MATLAB Simulink for the active half car suspension system. There have been some critical problems, mostly in the theoretical part and in the designing of MATLAB Simulink. However, these problems have been successfully resolved and the goal of the project has been achieved. The designed system is in compliance with the design requirements.

5.2 Recommendations:

There are many ideas that can be implement for improvement this project. For future work, it must using higher level of controller instead of state feedback controller. The controllers that can be implemented such as Neural Network Controller, Fuzzy Logic Controller, and PID Controller. A complete suspension system for half car to be controlled can be designed to achieve a better control for half car suspension system performance. This project should design the hardware for car suspension system, but this design needs a very high cost to build the system. Lastly, tuning this system using other algorithm such as Particle Swarm Optimization algorithm, Ant Colony algorithm and Genetic algorithm to compare which can provide more precise performance. For future research to utilize other than state feedback controller must improving the performance of system in real time.

CERTIFICATE

This is certified that the mini project report titled “**Multipurpose Mechanical Machine**” is duly submitted by “*Sahil Bhatkar, Aniket Degaonkar, Omkar Deshmukh and Sanket Gade*” has been completed under my supervision in a satisfactory manner in a partial fulfilment of the requirements for the award of semester IV Bachelor’s Degree in Mechanical Engineering to be conferred by the University of Mumbai. In my opinion, the work embodied in this report is comprehensive and fit for evaluation.

Mr. Rajaram Ghutukade
Mini Project Guide

Mr. Bhavesh Pasi
Head of the Department

ABSTRACT

We presenting project "Multipurpose Mechanical Machine" which finds application in much modern equipment and system work on the various operations like grinding, finishing, cutting, drilling etc. As the prices of drilling, cutting, grinding machine are so high and some are not portable, so we can try to made the multipurpose mechanical machine which are portable. The machine motor not required high power voltage it work on single phase, and power transmitted efficiently by the help of V-belt pulleys.

Introduction

Multi-purpose Mechanical Machine or MPMM as we call it is a machine that is made especially for the small scale industries where labours working are have very little technology .

MPMM it is a machine that performs their work quickly and efficiently without the hassle of using different machines for performing different operations on workpiece. It has Four arms on which four different operations are performed.

Multi-operation machine as a research area is motivated by questions that arise in industrial Manufacturing, production planning, and computer control. Consider a large automotive garage with specialized shops.. Industries are basically meant for Production of useful goods and services at low production cost, machinery cost and low inventory cost. Today in this world every task have been made quicker and fast due to technology advancement but this advancement also demands huge investments and expenditure.

Every industry desires to make high productivity rate maintaining the quality and standard of the product at low average cost. In an industry a considerable portion of investment is being made for machinery installation. So in this project work is proposed where a machine is designed cutting, drilling, grinding, polishing& shaping, some lathe operations at different working centers simultaneously which implies that industrialist will not have to pay for machine performing above tasks individually for operating operation simultaneously. Economics of manufacturing: According to some economists, manufacturing is a wealth-producing sector of an economy, whereas a service sector tends to be wealth consuming. Emerging technologies have provided some new growth in advanced manufacturing employment opportunities in the Manufacturing Belt in the United States. Manufacturing provides important material support for national infrastructure and for national defense. Before starting our work we have undergone through many research papers which indicates that for a production based industries machine installation is a tricky task as many factor being associated with it such as power consumption (electricity bill per machine), maintenance cost, no of units produced per machine i.e. capacity of machine, time consumption and may which can perform operations like drilling, cutting, grinding, polishing & shaping .

CONCLUSION

The conclusion can be made that the project on multipurpose machine considering economic aspect of production is performing well and with certain modifications can easily use in small scale industry successfully. The purpose is to perform four operations at a time is achieved, since all the operations mounted on a rectangular frame made of mild steel, when power is supplied, cutting by hacksaw and drilling is performed on same shaft and able to cut and drill wood, pvc because of lack in speed and light weight construction.

Similarly on other shaft at one end grinding of wood, pvc and aluminium is successful done, as grinding wheel consist of abrasive particle bonded together in circular shape and cut down small irregularities and provide flat surface, on other end of the shaft buffing operation is take place which provide shiny surface.

A Report On: Intensive Training (Heavy Water Plant – Electrical Department)

Prepared By: Pankaj Dhanaji Tandel

Industry Name: RCF Limited, Thal

Under Guidance Of: Mr. D.M.Ramteke (Assistant General Manager (HRD))

Prof.Nikhil Kasar

Mr.N.K.Shelke

Mr.Umakant Bakhhal

Time Period Of Training: 12thOctober 2020 to 26thOctober 2020

Acknowledgement

It's my prestige to get training in such a huge government industry RCF LTD. A special thanks to Dr. B.R. Patil Sir (Principal Vishwaniketan IMEET) for giving me & Mr. D.M.Ramteke (Assistant General Manager HRD), for giving me an opportunity to get training over here from experienced faculties,it was my pleasure to understand and experience all equipment , process of Heavy Water Plant.

I would like to thanks Mr.N.K.Shelke & Mr.Umakant Bakhai for helping me throughout the training & ensuring that we understand the plant efficiency .Lastly I would like to thank all employees and workers of Heavy Water Plant for providing me the technical knowledge & their experience help me with duty and for providing information for completion of report

Thanking You,

Pankaj Tandel

Abstract

Industrial training is an important phase of a student life. A well planned, properly executed and evaluated industrial training helps a lot in developing a professional attitude. It develop an awareness of industrial approach to problem solving, based on a broad understanding of process and mode of operation of organization. The aim and motivation of this industrial training is to receive discipline, skills, teamwork and technical knowledge through a proper training environment, which will help me, as a student in the field of Electrical Engineering, to develop a responsiveness of the self-disciplinary nature of problems in Electrical Engineering. During a period of 15 days training at RCF(Thal).

In HWP I learned about MCC & PCC. Working of interlocks and tripping system in emergency case. I learned what to do in power failure in industry. I learned about HT & LT motors ,maintenance and precaution to be taken on field. I leaned about Electrical power distribution in HWP. Function of DG set and UPS system.

1] OVERVIEW OF RCF LIMITED

Rashtriya Chemicals & Fertilizers Limited (RCF), a “Mini-Ratna”, is a leading fertilizers and chemicals manufacturing company with about 75% of its equity held by the Government of India. It has two operating units, one at Trombay in Mumbai and the other at Thal, Raigad district, about 100 KM from Mumbai.

RCF manufactures Urea, Complex Fertilizers, Bio-fertilizers, Micro-nutrients, 100 per cent water soluble fertilizers, soil conditioners and a wide range of Industrial Chemicals. It produces around 24.0 Lakh MT Urea, 5.0 Lakh MT Complex fertilizers and 4.5 Lakh MT of Industrial Chemicals every year. The company is a household name in rural India with brands “Ujjwala” (Urea) and “Suphala” (Complex Fertilizers) which carry a high brand equity. RCF has countrywide marketing network in all major states. Besides fertilizer products, RCF also produces a large number of industrial chemicals that are important for the manufacture of dyes, solvents, leather, pharmaceuticals and a host of other industrial products.

The “Make in India” mission was launched by the Hon’ble Prime Minister, Shri Narendra Modi in September 2014 with an objective to give the Indian economy sustainability and global recognition. The government is committed to transforming India into a global manufacturing hub, while ensuring that manufactured goods have ‘zero defect’ and ‘zero effect’ on the environment.

In consonance with the PM’s mission and Vision 2022, RCF endeavors to be one of the main driving forces behind India’s sustainable agriculture. RCF is one of the earliest units set up in the country with a vision of growth in fertilizer production for food security. The company was the first in the country to produce complex fertilizer which was introduced in the market in 1967 under the brand name “Suphala”. RCF took the lead in the country in setting up mega size fertilizer complex at Thal which was commissioned in the year 1985 and after that many more domestic mega plants followed suit. The company also made significant contribution in the great “Green Revolution” of the nation. RCF has also pioneered the manufacture of basic chemicals such as Methanol, Ammonia, Ammonium Nitrate, Sodium Nitrate, Sodium Nitrite, Ammonium Bicarbonate, Methyl amines, Dimethyl Formamide, Dimethyl acetamide, Formic Acid, Argon in India. RCF has been successfully operating a Sewage Treatment Plant (STP) of 22.75 MLD (Million Liters per Day) sewage capacity at Trombay unit since January 2000. RCF and BPCL have entered into MOU for new STP Project at RCF- Trombay. RCF shall supply around 40% of the treated water to BPCL. In its bid towards India’s vision of achieving ecologically sustainable growth, RCF has already forayed into solar power generation. RCF has set up a 2 MWp ground mounted Photovoltaic Solar power plant within the factory premises and an aggregate capacity of 1.29 MWp solar rooftop facilities.

At present, there is a deficit of indigenously produced urea in meeting India’s total requirement which is being met through imports. In order to augment the domestic urea capacity to fill this gap and achieve self-sufficiency in line with the ‘Make in India’ mission, RCF in association with GAIL, CIL and FCIL has taken up revival of FCIL’s unit at Talcher based on Clean Coal Technology. The project entails setting up Urea plant of 1.27 million MT per annum capacity. In order to utilize country’s huge coal reserves, Talcher Fertilizers

will be a game changer for India in terms of opening a new avenue in coal gasification and shall reduce dependency on Natural Gas for Urea manufacturing. Department of Fertilizers (DoF) has nominated RCF for 52% equity in Namrup IV project in BVFCL, along with Oil India Ltd., Govt. of Assam and BVFCL holding 26%, 11% and 11% equity respectively in joint venture for setting up of Namrup unit of Brahmaputra Valley Fertilizer Corporation Limited. The proposed project entails setting up a Urea plant with an annual capacity of 1.27 Million MT. Apart from the proposed fertilizer projects in India, RCF is also looking for opportunities, for setting up Joint Venture Projects abroad in resource rich countries.

“Make in India” also lays emphasis on the principle that sustainability should not be confined to the continuity of economic progress alone, but should imply a resolve that the country would not compromise on its commitment towards environment protection.

Since inception, RCF has successfully and safely operated two dozen chemical and fertilizer plants for the past five decades at Trombay. The company has operated plants at Thal for past three decades and maintained the quality of environment. This itself has been a huge challenge and demonstrates company’s commitment towards environment and concern about the neighborhood. RCF has spent more than Rs.400 Crore over the years in various pollution abatement and environment improvement schemes.

RCF has always striven for upkeep of the plants through modernizing and upgrading technology. Revamping and de-bottlenecking is the secret that has kept the company thriving for five decades. This has facilitated plants to sustain operations and meet technological challenges of improved efficiency, lower energy consumption and meet the environment norms. It has also resulted in company achieving the highest standards of safety and product quality. The company is maintaining ISO 14001 accreditation for environment since the last seventeen years. Both the manufacturing units are accredited with ISO 9001 for quality, OHSAS 18001 for Occupational Health and Safety and ISO 50001: 2011 for Energy Management System.

Agriculture is the mainstay of the Indian economy, being the source of employment for more than 50% of the population. The connection between agriculture and ‘Make in India’, ‘Vision 2022’ will promote economic security of farmers. The objectives of which can be enunciated as: a) Improved professionalism in agri-business b) Increased private investments in agriculture support activities like irrigation projects, research and development, training etc. c) Improved agri-metrics like yield per hectare etc. and d) Improved agri-produce marketing and sales.

RCF has sought to bridge the gap between Research Scientist and the farmer by setting up dedicated Farmer Training Centers at Nagpur and Thal. RCF publishes a monthly farm magazine “RCF Sheti Patrika” (since 1967) which disseminated latest agricultural information & practices to the farming community. This magazine is distributed free of cost to the farmers and presently it has a readership of over 1.50 lakh farmers. The company has also introduced a “Toll Free Helpline – 1800 22 3044” service through which the farmers can get advice and suggestions on their agriculture and farming related queries. RCF has launched a page named “RCF Kisan Manch” on Facebook, Twitter, Youtube and Instagram to facilitate easy interaction with stakeholders and for creating awareness about activities undertaken by RCF. Mobile App “RCF Kisan Manch” has also been launched since Oct 2017.

To promote balanced use of fertilizers for improving the farm productivity and also to help in maintaining soil health, RCF has established 13 (Thirteen) static Soil Testing Laboratories (STL) in the country at strategic locations, namely Mumbai, Kolhapur, Nagpur, Ahmednagar, Hassan, Vijayawada, Lucknow, Kolar, Suryapet, Raipur, Nanded, Satara and Latur covering the soil testing activity in the districts around these STLs. In addition to the static STLs, the company also operates 6 (six) Mobile Soil Testing Labs. More than 1.25 lakh soil samples are analyzed per year in these labs and Soil Health Cards are issued to the farmers. RCF is giving farmers welfare programs like Kissan Suvudha Kendra, Urban Marketing through e-commerce platforms, farmers knowledge centres, Live field demonstration, crop literature, community Radio, Kissan knowledge centers, Krishi melas etc. This service is rendered free of cost to farmers.

RCF also strongly believes in discharging its Corporate Social Responsibility diligently with and objective to benefit the needy and for general good of the society. A host of CSR activities are undertaken by the company which includes adoption of villages, providing drinking water, providing schooling facilities and scholarship, providing Mid-day-meal, Community Medical facility through Mobile Medical Van, special measures of SC/ST and under privileged, organizing "Adivashi Kabaddi tournament" to motivate sports activities in tribal and rural area, providing training to farmers etc. This way the company is producing engineers to contribute and take forward the "Make in India" mission and vision 2022.

RCF has been performing well for the last several years and in one of the few PSU's which have been posting profits consistently. RCF has been performing well for the last several years and in one of the few PSU's which have been posting profits consistently. The company has achieved revenue from operations of Rs.8885.47 Crore with the net profit of Rs.139.17 Crore in the last financial year 2018-19.

2]OVERVIEW OF RCF THAL UNIT

Rashtriya Chemicals & Fertilisers Ltd. (RCF) is an Indian urea and ammonia producer with headquarters in Mumbai (formerly known as Bombay) in India. Although the urea and ammonia industry has been deregulated in India, RCF is state owned. This may change as the Indian government pursues a slow privatisation policy. In late 1999, the Disinvestment Commission proposed cutting the government shareholding from more than 90% to 49%.

The expansions will allow higher capacity utilisation of the RCF plant. Of course, this will maximise return on assets. It was also intended to reduce the amount of energy needed for a given amount of ammonia, since there was a shortfall in natural gas supply.

THAL MAHARASHTRA COMPLEX

RCF decided to revamp its Thal (Maharashtra) complex in two phases. The first ended in 1996, and the second in June 1999. The company now has a third, much greater, expansion planned.

It planned to expand its ammonia plants in two phases. The first began in 1996, and was intended to increase production to 1,500t/day. The second phase was to increase the capacity of each plant to 1,600t/day.

In the initial phase, which took 30 months and cost Rupee 880 million, RCF installed a new process air compressor unit, a new hydrogen recovery unit, a new cooling tower and new pumps. It also converted its steam generation boilers, auxiliary boilers and steam superheaters to naphtha/natural gas and replaced reformer tubes, condensate stripper trays and other equipment.

Basic engineering was carried out by Haldor Topsoe. Detailed engineering was executed by Projects & Developments India Ltd (PDIL).

HYDROGEN RECOVERY UNIT AND CO₂ RECOVERY UNIT

The hydrogen recovery unit was intended to recycle hydrogen that had previously been used as fuel. This resulted in a 4% increase in ammonia production. The hydrogen fuel was replaced with natural gas.

The new tubes were made from Manurite 36XM in order to heighten the threshold of the tube-wall temperatures. The thinner tube walls also allow higher catalyst volume and a reduced pressure drop.

The CO₂-removal unit had to be upgraded to accommodate increased load. This allowed the absorber to handle process gases equivalent to 1,500t/day with a CO₂ slip of less than 800ppm. This contrasts with the status quo ante which used a CO₂ slip of 1,000 ppm to produce 1,350t/day.

Sulzer Industries trays were used as replacements in the process condensate stripper. The downcomer area was increased by about 9%. This allowed a better mass-transfer coefficient and increased capacity.

The existing two process-air compressors could handle 2,700t/day of ammonia (with the instrument-air compressor grid). A new third air compressor was necessary to produce the 3,200t/day of ammonia expected of Phase II.

SECOND-PHASE PROCESS IMPROVEMENTS

The second phase was intended to replace gas and converted gas boilers (which were causing problems), modify a circulation pump and the syngas compressor, install additional separators, a new refrigeration system and a suction chiller for the compressor.

To accommodate the greater load the syngas compressor barrels and the steam-turbine inlet-nozzle box were redesigned and the steam drum was replaced. Two new chillers have been added, providing new refrigeration. The pumps needed new impellers in order to process the much increased quantities.

The boilers had to be replaced due to damage from previous power outages (India has notoriously unreliable power supplies). A suction chiller added to the exit of the methanator is designed to improve the syngas compressor's efficiency.

FURTHER EXPANSION

RCF has plans to expand its Thal urea plant again, provided the government approves. The proposed expansion would add 768,000t/yr. However, the new extension would be unlikely to come into production until 2002/2003. The proposed expansion would cost slightly over \$300 million. Despite this, RCF has already arranged feedstock supply with Enron, which it hopes will solve its gas supply difficulties.

RCF has also been linked with a proposed fertiliser plant in Oman, although it is not clear whether it will press ahead. The company may also plan a plant to produce methylamines and its derivatives in India.

3]OVERVIEW OF HEAVY WATER PLANT

Heavy Water Plant Thal is the first of second-generation plants in India and is made completely with indigenous efforts. The vast technical resources available with Heavy Water Board with the experience gained by commissioning and sustained operation of the earlier plants were utilised for setting up of the plant. It is located at Thal-Vaishet village in Raigad district of Maharashtra and is about 100 kms south of Mumbai on National Highway No.17. It is about 20 kms away from Pen railway station of Panvel - Roha section. The site is also accessible from Gateway of India, Mumbai by Catamaran services. HWP Thal was commissioned in 1987. Setting up of the plant was a major task as a number of components were to be developed for the first time indigenously. Some of them were special tower internals, canned motor pumps, glass seals, mass spectrometers, multilayer vessels etc. and this involved considerable pre-project effort by Heavy Water Board.

Process Description

The plant comprises of two streams consisting of two separate isotopic exchange units, final enrichment units, final production units & cracker units, but a common ammonia synthesis unit. Feed synthesis gas (a mixture of one part of nitrogen and three parts of hydrogen containing deuterium from the Ammonia plant) is routed through the plant at a flow rate of about 96 T/Hr. at a pressure of about 180 kg/cm².

The pressure of the gas is first raised by 40 kg/sq.cm. by a booster, to take care of pressure drop. It is then cooled in a heat exchanger by the outgoing cold gas returned from the plant. The gas is thereafter passed through a purification unit. In this unit the oxygenated impurities contained in the gas are removed and the gas is saturated with ammonia.

The purified synthesis gas saturated with ammonia is then passed through the first isotopic exchange tower working at -25°C where deuterium in the gas is transferred to a counter current stream of liquid ammonia containing potassium amide catalyst fed from the top of the tower. The deuterium enriched ammonia from the bottom of the exchange tower is then fed to the second isotopic exchange tower where it gets further enriched by coming in contact with the enriched synthesis gases obtained by cracking of enriched ammonia. A part of the enriched gas and liquid from the second isotopic exchange tower is then taken to the final enrichment section where the concentration of deuterium in the ammonia can be further increased as desired upto 99.8%. Finally, the enriched ammonia so obtained is made free of the catalyst and is cracked. A portion of this enriched synthesis gas is burnt to produce heavy water. However, for reasons of better recovery efficiency the concentration of deuterium in ammonia in the final enrichment section is kept low so as to produce heavy water of about 60% which is then vacuum distilled to produce heavy water of nuclear grade.

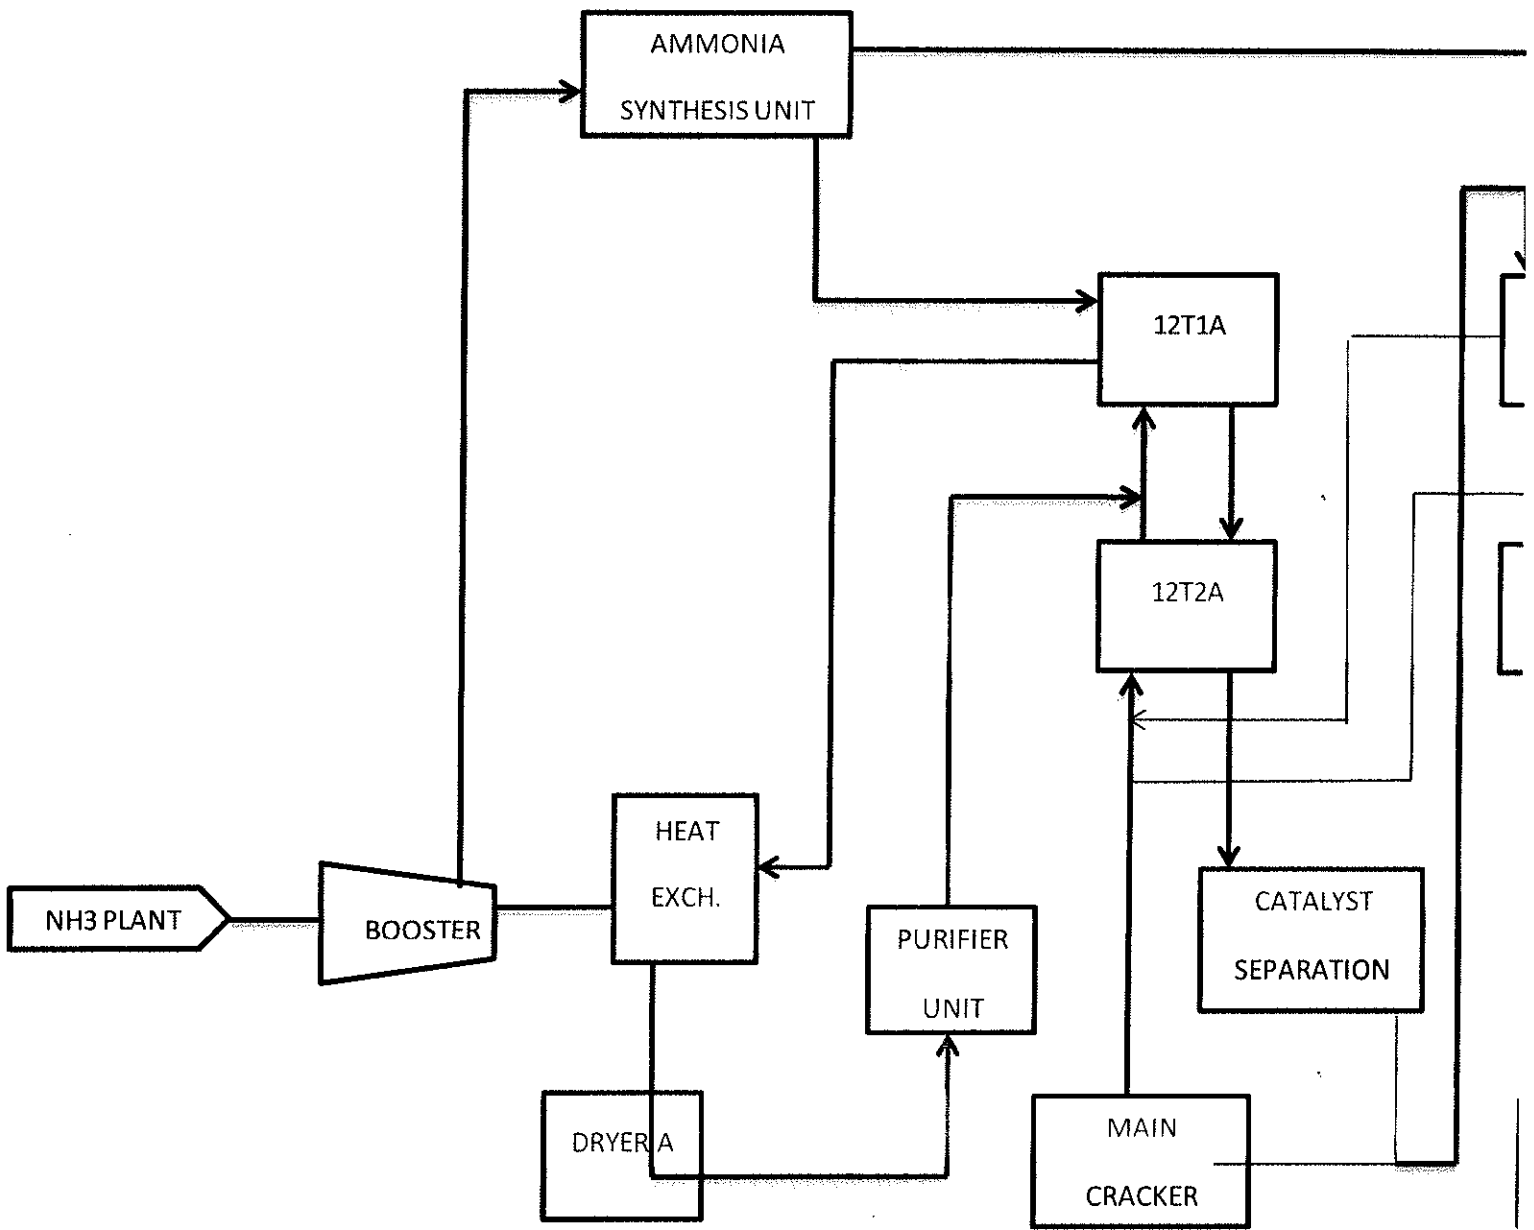

The cold synthesis gas depleted in deuterium from the first exchange tower, before its return to Ammonia Plant, is heated by the incoming feed gas from the same plant and is passed through an ammonia synthesis unit. In this unit, a portion of the synthesis gas equivalent to the amount of the ammonia cracked in the crackers is converted into liquid ammonia and fed to the top of first exchange tower. The rest of the depleted synthesis gas equivalent to the feed gas supplied is returned to the ammonia plant. The power to the plant is supplied by

Maharashtra State Electricity Board from their 100 KV grid. The fuel for heating of the crackers of the plant is natural gas, which is supplied by GAIL. This plant is operated and maintained under an O & M agreement.

Some of the special features of the plant are:

- HWP (Thal) is the first heavy water plant in the country based on the ammonia-hydrogen exchange process, which has been set up without foreign collaboration. The basic design of isotopic exchange unit was developed in-house
- The plant adopts the latest technology using micro-processor based distributed digital control system for instrumentation and process control instead of the conventional pneumatic analogue system. The system provides supervisory and monitoring functions for feed control stations. It displays and records data acquired from the plant system and has facilities for data logging and printing alarm messages.
- This plant comprises of two streams with some common units like synthesis unit, sub-station, inert gas unit, instrument air unit, catalyst preparation unit, cooling towers etc.
- Completion of the project has been successfully achieved without any time overrun

SALIENT DATA OF HEAVY WATER PLANT(THAL)	
Process Used	Ammonia-Hydrogen Mono-thermal Exchange
Capacity of the Plant	90 MT / Year
Date of Commissioning	February 1987
Capital Cost of the Plant	Rs.15600 lakhs
Operating Pressure	220 kg/cm ²
Synthesis Gas Flow Rate	96 Te/Hr (48 Te/Hr in each stream)
Total Weight of Structure	7600 Te
Total Weight of Equipments	4400 Te
Maximum Height of Towers	40 M approx.

Interlock systeme in plant:

The interlock consist of one or more switches that prevent both main power and generation. Most interlocks devices for electrical system employs a mechanical device to manage movement of circuit breaker.

In this plant interlocks use two contactor in antiparallel connection means If we switch on the contactor C1 the contactor C2 will switch off.

Tripping System in plant:

Overload circuit is the most common for circuit breaker tripping. It occurs when a circuit is attempting to draw a greater electrical load than it is intended to carry . Hence, the breaker or fuse is intended to trip or blow before the circuit wire can heat to dangerous level.

The circuit breaker trips when it cannot handle excess current load. That means flow of electricity is cutoff to keep your circuits safe from overheating or causing more damage.

Functioning of MCC :

MCC is the assembly to provide power to electrical motors through dedicated feeders from central location. Also, from MCC motor controlling is done. MCC consist of power bus, incomer, bus coupler, feeders, circuit breakers, etc.

There are 10 MCC in HWP which works on 3 phase 415 V AC supply. Stepdown transformer of 11kv/415V use to give supply to LT motors. There is bus coupler in MCC which is use when one supply line is carry the load of other motors with its full load efficiency.

Control of MCC is done by PCC . In MCC consist of one number of normal bus coupler which connect both normal bus during tripping of any one incomer is automatically . There is emergency bus coupler which fed power to emergency bus during normal condition through incomer 2 where both normal incomer trips emergency bus coupler automatically trips then due to under voltage relay DG set start and subsequently DC incomer get start and provide emergency power to emergency bus. In MCC there is make such provision that only critical load is given on emergency bus. All incomer and bus couplers are on-off through ACB.

Electrical Substation:

In industry there are two types of substation

- 1) Outdoor sub-station
- 2) Indoor sub-station

In HWP indoor sub-station is used.

A substation in which the apparatus is equipped inside the substation building is called indoor substation. Such type of substation are mainly used for the voltage upto 11KV but when the surrounding air is contaminated by impurities such as metal corroding gases and burners,conductive dust,etc. their voltage can be raised upto 33KV to 66KV.

The substation is subdivided into several compartment like control compartment indicating and protective devices compartment, main busbar compartment, current transformer and cable sealing compartment.

The switchgear on the supply or primary side will consist of MOCB only.The high voltage supply is given to the primary of the transformer through a circuit breaker from the bus bar, various feeders emergency circuit. The panel on each feeder consist of an isolator switch & circuit breaker the panel also provided the measuring instrument.

H.T motors and its protection:-

In industry high tension i.e. motors supplied by high voltage such as 3.3 kv and 11 kv motors. This motors have power rating of more than 150 KW. In hwp DOL starter and star delta starter are used for HT motors.

There are three 4.2MW motors in HWP which are connected through star delta starter and other motors are connected in DOL starter.

Protection of HT motors:

- Should protect against abnormal operating conditions as well as faults in the system which is connected.
- Selection of suitable protection system depends upon voltage and power rating of motor.

In general motors are protected from:-

1. Overload
2. Short circuit
3. System faults
4. Switching overvoltages

LT motors and its protection:-

In industry low tension i.e LT motors having voltage supply of 415 V are connected with DOL starter.

Relays are ACB are used for protection of LT motors.

Protection of LT motors:-

- Thermal overall protection
- Short circuit protection
- Under voltage protection
- Negative phase sequence protection
- Earth fault protection
- Overall voltage protection

Circuit Breakers:-

A circuit breaker is a piece of equipment which can

- i. Make or break a circuit breaker either manually or by remote control under normal conditions
- ii. Break a circuit automatically under fault condition.
- iii. Make circuit either manually or by remote control under normal conditions.

Operating Principle:-

A circuit breaker essentially consists of fixed and moving contacts called electrodes. Under normal operating conditions these contacts remain closed and will not open automatically until and unless the system becomes faulty. Of course the contacts can be opened manually or by remote control whenever desired. When a fault occurs on any part of the system, the trip coils of the circuit breaker get energised and the moving contacts are pulled apart by some mechanism, thus opening circuit.

When the contacts of a circuit breaker are separated under fault condition, an arc is stuck between them. The current is thus able to continue until the discharge ceases. The production of arc not only delays the current interruption processes but it also generated enormous heat which may cause damage to the system or to the circuit breaker itself. Therefore, the main problem in a circuit breaker is to extinguish the arc within the shortest possible time so that heat generated by it may not reach a dangerous value.

Three types of circuit breaker are used in HWP .

1. For HT motors vacuum circuit breaker is used. In vacuum circuit breaker (VCB) arc quenching take place in vacuum and the technology is suitable for HT motors

Protection:

- i. Check vacuum chamber
 - ii. Check contacts
 - iii. Maintain pressure at 10^{-6} bar
2. Oil circuit breaker are replaced with VCB in HWP plant for better protection.
3. Air circuit breaker also used in HWP for LT motors.

UPS and Batteries:

UPS means uninterruptable power supply. UPS gives uninterrupted power supply at any condition . In this plant UPS1 & UPS2 are used. The total rating of UPS is 125KVA.In each UPS 180 batteries of 2.2 V are connected in series which gives practically 200V of supply.

This device is used for emergency conditions such as power failure. In such condition UPS have 10hrs of battery backup for running critical motors & lightning in plant.

After such emergency conditions when power supply get continue then UPS gets charged with boost charger . Then it keeps charged using float charger which gives continuous supply to UPS under normal condition.

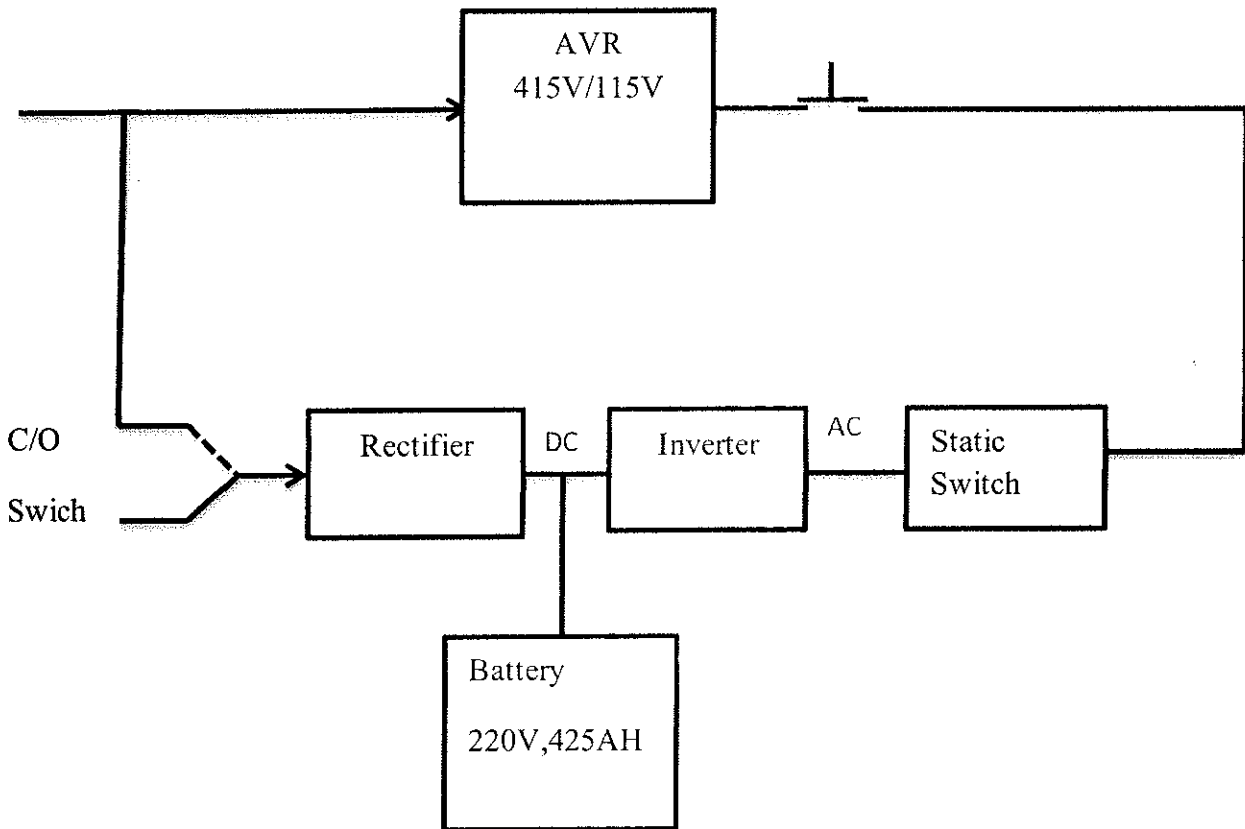

Fig. Block Diagram of UPS

UPS output supply is used for following things:

- PLC-SCADA
- PC
- Control supply
- Instrument Panel
- Emergency light
- Smoke detector

Maintainace:

Improve power quality like

- a. Voltage Regulation
- b. Stand by source
- c. Harmonic filters
- d. Surge protection device

Batteries:

Data:

Manufacturer : Exide industrial

Capacity : 425Ah

Float Voltage: $2.25^+_{-0.02}V$

Electrical Power Distribution System :-

Electrical energy has been extensively used in operation of HWP Thal. The source of this energy is from MSEB with emergency power load having diesel generator set, UPS backup installed in substation. Actually the plant is almost entirely dependent on supply through MSEB. DG set and UPS power are used in case of power failure and in emergency for safe shutdown of plant. Power is received from MSEB by to parallel double circuit 3-phase 100kv line to MSEB station at Thal.

1. 100kv switch yard :

Heavy water plant is getting power from MSEB at 100kv parallel lines. There is 100kv switchyard having two 100kv/11kv . 25/35MVA transformers and associated equipment like 100kv isolaters VCB, CT's, LA's, etc. PT signals are receiving from MSEB switchyard. Power is brought to main substation by 18 numbers of 800 sq.mm single core armoured cables bundles 3 number for each phase.

2. Main substation :

Main substation is having 11kv switchgear, 3.3 KV switchgears, 415v PCC's and MCC's, DC. Distribution system UPS system, Battery room, emergency power distribution board, lighting power distribution boards, ventilation system transformers, series reactors and DG set.

Power failure and backup classes :

Class 1 = Battery

Class 2 = UPS

Class 3 = DG set

Class 4 = Power taken from MSEB

Electrical Measuring instrument:

1. CT (current transformer):

It is used to measure and protect over current in transformer.

2. PT (Potential Transformer)

It is used to measure overvoltage and protect transformer.

3. Clamp meter:

It is used to measure high current flowing through the cable without cutting it.

4. Megger:

Megger is important measuring instrument . It is used to measure IR value in winding.

5. Multimeter:

It is used to check continuity of electrical parts.

6. Earth tester:

Earth tester is device which is used to measure Earth resistance for neutral resistance purpose & earth resistance purpose.

Transformer:

Transformer is a static device used to step up or step down power without changing in frequency.

In HWP generally step down transformer is used. There are nine transformers in HWP.

- 1) 11/3.3KV , 6MVA
- 2) 11KV/415V , 2MVA

Maintenance:

- 1) Check oil level,oil cap
- 2) Check leakage oil
- 3) Check colour get in breather.

Electrical safety measurement taken in plant:

- **Isolation of system:**
Make sure our system must be isolated from electrical supply.
- Do not work on any system in ON line condition because high power is travelling in bus.
- While working remove all buses and isolator be in off position.
- **Use isolating rubber gloves:**
Isolating rubber gloves will do the job of protecting the worker against electrical shocks.
- **LOTO system (Lock Out Tag Out):**
In this if we want to isolate the MCC or substation panel , then we put danger tag to MCC panel at both front and back side and lock the MCC panel . If any person show this tag then they do not work on this panel because bus already changed.

ABSTRACT

Water is a basic need of living beings. So, everyone should be benefited with quality and quantity water. Around 97 percent of water is held in oceans, while 3 percent is fresh water. Moreover, freshwater is not evenly distributed across land surfaces, and there are number of heavily populated countries where fresh water is scarce.

On other hand, concrete industry consumes large amount of water in mixing of mortar, mixing of concrete and even in curing which otherwise can be used for drinking purpose. Construction industry is second largest industry in India which consumes major amount of water.

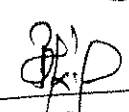

Waste water gets mixed with the surface water after discharging it from industries. It tends to reduce the quality of surface water which is sometimes get consumed by humans for drinking purpose. Bad quality of water may affect the health of human beings and aquatic life also.

Now a days, scarcity of water is becoming a worldwide problem. And some extra efforts should be taken to resolve this problem. So, use of waste water discharged from different types of industries or locations in construction industry may help to reduce the problem of scarcity of water. This work aims to explain how treated waste water can be used in construction industry and reduces the load on nature.

Waste water collected from dairy, car wash center, sewage treatment plant, etc. is used as 100 percent substitution while making concrete. Cubes are supposed to be tested against compression load on 7, 14 and 28 days by casting and curing it with water from oil industry. Three concrete cubes are supposed to be tested during each and every test. So, 9 cubes are prepared by using waste water substitution which are willing to be compared with 9 cubes which are prepared by using potable water.

(II)

TRUE COPY

Principal
Vishwaniketan I.M.E.T.

Chapter 5

CONCLUSION

According to BIS, only potable water should be used for concrete to achieve the required strength. But various studies showed that treated waste water from various industries gives the required target strength to the concrete. According to Literature Review, treated waste water from car wash center, dairy, sewage treatment plant, etc. gives the strength more than concrete casted with potable water.

This research is done to check whether treated water from oil industry can be use in concrete or not. The concrete casted and cured with potable water gives strength to the concrete which is more than target mean strength. On the other hand, the concrete which is casted and cured with industrial waste water gave strength less than target mean strength but more than characteristic strength.

As results shows strength of concrete cube less than target mean strength but more than characteristic strength then we can say that water used in secondary concreting work can be replaced with treated industrial waste water. Secondary concreting works like PCC, Compound walls, etc.

Abstract

In the seismic design of building, understand the effect of position of shear wall on behavior of RC structures. In this paper focus on, 25 storey building have been modeled using software ETABS-2015 by dynamic analysis. Shear walls are structural systems which provide stability to structures from lateral loads. All the analyses have been carried out as per Indian Standard code books. Based on the literature of previous studies effective positioning of shear walls have been chosen. This study is done on multistory building with and without shear wall. Dynamic responses under zone III, India earthquake, as per IS1893(Part 1):2016 and on type of soil is medium have been carried out. Response Spectrum Method is carried out for the results are computed based on storey displacement, storey drift, base shear and time period. Considering the multistoried building, three types of model. Building without shear wall, building with shear wall at middle core, building with shear wall at corners shows the best performance on effective position of shear wall.

Keywords: Dynamic analysis, shear wall, ETABS, Response Spectrum Method etc.

Chapter VII

Conclusion

TRUE COPY

Page 42

Principal

Vishwaniketan's (i MEET)

This study reveals that the storey displacement, drift, base shear, time period and the overall seismic response of the structure is affected by the arrangements of shear wall. From numerical results of the present study, the following conclusions may be drawn:

1. In high rise structure, serviceability (displacement and drift) become equally important as that of strength and adding shear wall as central core in bare model displacement is reduced by 6.66 % which clearly shows how shear wall is important.
2. After addition of shear wall as central core in bare model, considerable reduction in time period from 2.44 sec to 1.738sec is achieved, this shows the benefit of using shear wall as central core in high rise structure, which is used for installing lifts in the structure.
3. Positioning and the shape of shear walls do not show much difference on base shear but base shear increases with addition of shear wall as stiffness increase.
4. As per analysis, it is concluded that the deflection at different level in multistoried building with shear wall is comparatively lesser as compared to RC building without shear wall.

Hence, we can conclude that building with shear wall shows results in term of storey displacement, storey drift, base shear and time period etc. at the same time considering shear all position corners perform better under seismic load.

INTRODUCTION

ONE OF THE BASIC REQUIREMENTS IN ALL BUILDINGS IS THAT THE STRUCTURE SHOULD REMAIN DRY AS FAR AS POSSIBLE. IF THIS CONDITION IS NOT ACHIEVED, THE BUILDING MAY BECOME UNHABITABLE AND UNSAFE FROM STRUCTURAL POINT OF VIEW. THE ENTRY OF WATER OR DAMPNESS INTO A BUILDING IS TERMED AS LEAKAGE.

LEAKAGE IN BUILDINGS IS COMMON AND IT IS IMPORTANT TO UNDERSTAND THE CAUSES AND MEASURES TO BE TAKEN FOR THEIR PREVENTION.

MOST OF THE BUILDING MATERIALS HAVING PORES IN THEIR STRUCTURE AS FOR EXAMPLE CONCRETE EXPAND ON ABSORBING MOISTURE FROM ATMOSPHERE AND SHRINK ON DRYING. THESE MOVEMENTS ARE REVERSIBLE.

AT CONDITION OF SATURATION LEAKAGE IN BUILDINGS OCCURS IN WALLS, FLAT ROOF, AND PARAPET WALL ETC.

3. EFFECT OF LEAKAGE

The structure is badly affected by dampness. The prominent effect of dampness is as follows:

1. A damp building creates unhealthy conditions for those who occupy it (give a rise for breeding of mosquitoes).
2. The metals used in the construction of the building are corroded. Unsightly patches are formed on the wall surfaces and ceilings.
3. Decay of timber takes place rapidly due to dampness
4. The electric fittings are deteriorated due to dampness.
5. The material used as floor coverings are seriously damaged
6. softening and crumbling plasters
7. Wall decoration and paint damaged.
8. disintegration of the masonry and brick wall by dampness

TESTING WATER LEAKAGE IN BUILDING

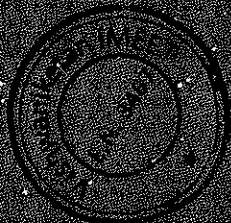

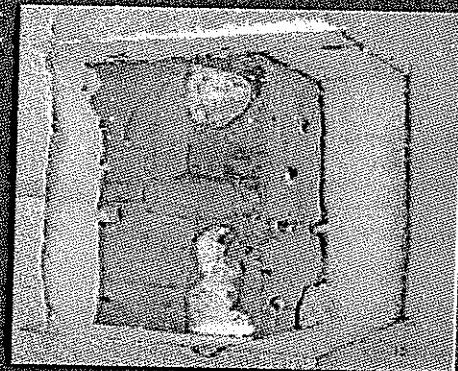

ASTM E2128-01a, Standard Guide for Evaluating Water Leakage of Building Walls, published in January 2002 by ASTM International. This guide describes methods for determining and evaluating causes of water leakage of exterior walls.

This guide is intended to provide building professionals with a comprehensive methodology for evaluating water leakage through walls.

systematic approach to an evaluation

1. Review of project documents,
2. Evaluation of the wall's design concept
3. Determination of the building's service history
4. Inspection
5. Investigative testing,
6. Analysis, and
7. Report preparation

• TEST OPENING AT-

MAN MADE LEAKAGE PROBLEMS-

CAUSES OF LEAKAGE

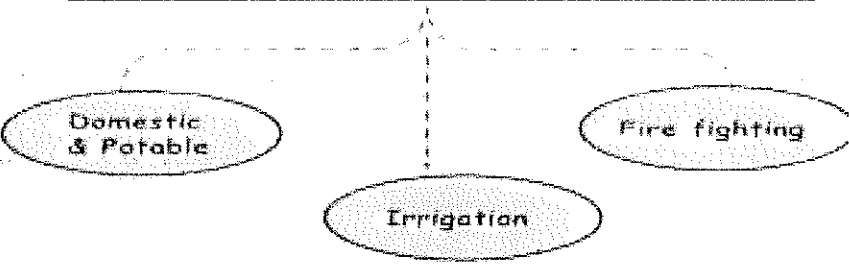

1. Action of rainfall : If the faces of wall exposed to heavy showers of rain are not suitably protected, they become source of leakage in a structure. Similarly leakages from roofs also permit rainwater or drain water to enter in a structure ,Some times leakage from drain water cause settlement by washing the soil under foundations
2. Condensation: The moisture is deposited on the walls, ceilings etc. due to condensation process. Adequate ventilation is essential in any property for the wellbeing of the residents
3. Water storage in building

LEAKAGE IN BUILDING AND REMIDIES

- Leakage through roofs:

1. Lack of proper slope thereby causing stagnation of water (1.25%) Remedy: Adequate slope should be provided to prevent stagnation of water With expansion joint, clogged gutters is the most common cause of leakage, check to see if they are clean.
2. Lack of proper drainage system Remedy: Sufficient drainage pipes should be provided
3. Lack of coping of walls Remedy: coping on the top of the wall should be provided
4. Poor maintenance of water pipe connections and joints Remedy: Maintenance of water supply pipe connections and fitting should be leakproof.

- Leakage through walls

1. Lack of stone cladding/ waterproof and painting
2. Poor orientation and wind direction Natural ventilation
3. Lack of chajjas over openings

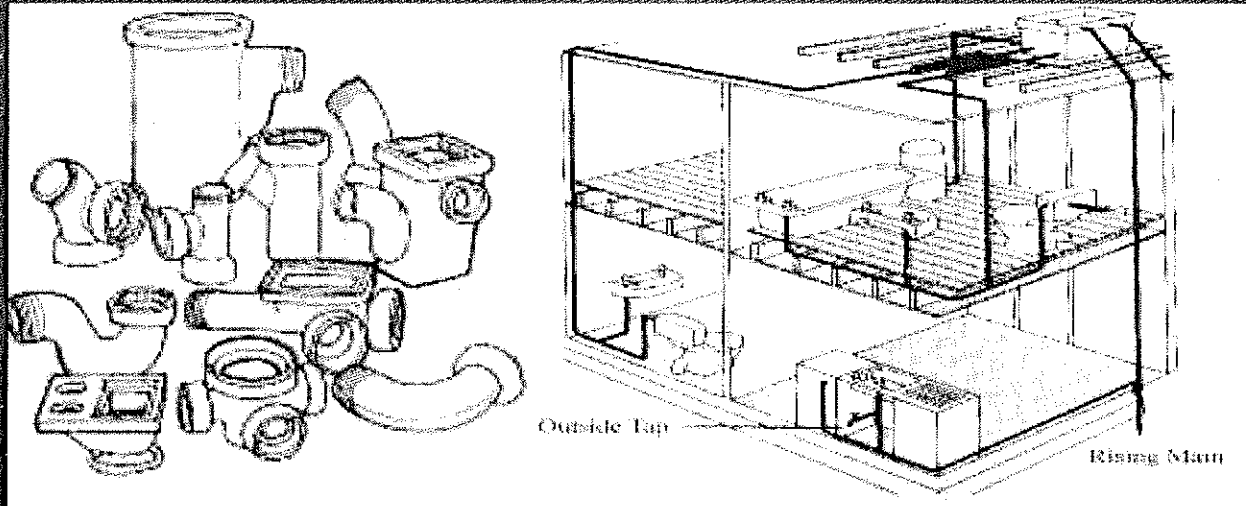

TRUE COPY

[Illegible handwritten text]

LEAKAGE FROM UPPER FLOOR

1. Crack in the closet and its trap or sewerage network Remedy: It should be replaced.
2. Leakage from the concealed pipe joints Remedy: It should be examined and replaced the same.

MAINTENANCE FOR PREVENTING LEAKAGE

1. Cleaning of terraces, drains before monsoon and when choked.
2. Replacement of leaky/damaged washers in fittings.
3. Replacement of leaky/damaged pipe line, gate valves, etc.
4. Replacement of leaky/damaged gasket in flanges.
5. Replacements of leaky/damaged joints in CI drain pipes.
6. Replacement of leaky/damaged MStrays under Air Handling Units

MATERIAL USED FOR DAMP PROOFING TYPES

1. Flexible material: Material like bitumen felts, plastic sheeting (Polythene sheet) etc.
2. Semi rigid materials: Materials like mastic asphalt or combination of materials or layers.
3. Rigid materials: Materials like first class bricks, stones, slates, cement concrete etc.
4. Grout consisting of cement slurry and acrylic based chemicals/polymers.

MATERIAL FOR DAMP PROOFING REQUIREMENT (SPECIFICATION)

1. It should be impermeable or should have very low permeability.
2. It should have strong adhesion with substrata.
3. It should be sufficiently elastic due to temperature fluctuations.
4. It should have high resistance of cracking.
5. It should be resistant to ultra violet rays.
6. It should be breathable i.e. permit vapor transmission.
7. Its application should be easy.
8. It should be durable.

TRUE COPY

Government College (MCT)

COMMONLY USED MATERIALS FOR DAMP PROOFING.

- 1. Hot bitumen:** This is a flexible material and is placed on bedding of concrete or mortar. This material should be applied with a minimum thickness of 3 mm.
- 2. Mastic asphalt:** This is a semirigid material and it forms an excellent impervious layer for damp proofing. Good asphalt is a very durable and completely impervious material.
- 3. Stones:** two course of sound and dense stones as granites, slates, etc. laid in cement mortar with vertical breaking joints.
- 4. Bituminous felts:** isogam This is a flexible material. It is easy to lay and is available in rolls of normal wall width.
- 5. Metal sheets:** These sheets of lead, copper and aluminum can be used as membranes for damp proofing.
- 6. Combination of sheets and felts:** A lead foil is sandwiched between asphalt or bituminous felt. This is known as lead core and it is found to be economical, durable and efficient.
- 7. Mortar:** The mortar to be used for bedding layers 1:3. A small quantity of lime is added to increase the workability. For plastering work,
- 8. Bricks:** Dense bricks, absorbing water less than 4.5% of their weight, can be used for damp proofing.

Internship Letter

Date: 4th December 2021

To Whom It May Concern

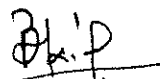

This letter is to certify that Vriksh Panditpautra has successfully completed his internship program of 11 months with Unbox Innovations. His internship tenure was from December 29th 2020 to November 30th 2021. He was working with the Technical team as a full stack developer and worked on both the backend and front end part and was actively & diligently involved in the projects and tasks assigned to him.

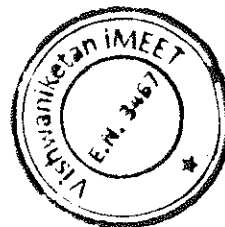

During the span, we found him to be a punctual and hardworking person. His learning powers are good and he picks up swiftly. His feedback and evaluation proved that he learned keenly. Moreover, his interpersonal and communication skills are brilliant.

We wish him a bright future.

Sincerely,

Khushboo Ray

Dear Sir,

With reference to your Letter Ref.: ViMEET/ - / - / 2021-22 dated 21st June, 2021 we would like to inform you that we can allow your student Mr. Aniket H. Shirke studying in 3rd Year B.E. - Electrical for Summer Training from for Internship from 1st July to 30th July, 2021 (one month) in our Organization / Plant. His timing will be from 11:00 hrs to 16:00 hrs.

Please note, our Company does not have the policy of paying stipend to Summer Training Students. He is not allowed to use Company Transport as well Canteen facility.

Photography is strictly prohibited in the Plant, hence please instruct your student not to use mobile phone for photography in the Plant. Violation will lead to seizure of phone and they will not allow continuing the training further.

Thanking you,

Yours Faithfully,
For THE BOMBAY DYEING & MANUFACTURING CO. LTD.

To,

Subject: Permission for visit the Water treatment plant at Khopoli for
Academic Purpose.

Respected Sir,

We would hereby like to arrange an educational visit of our T.E. (A&B) Civil Engineering student to the Water treatment plant at Khopoli for study various technical things of Environmental engineering. The purpose of visit is purely academic. The total number of students visiting the site will be 130 and they will be accompanied by 4 faculty.

Vishwaniketan is a public trust established by professionals drawn from the industry, education and administration with excellent experience in the respective fields. The campus has been located near Navi Mumbai, at Khalapur on Mumbai- Pune expressway. This has created platform for students, teachers, researchers and professionals to adopt excellent teaching - learning practices based on project Based Learning (PBL). This will encourage entrepreneurship and finally support product-development through start-ups and empower teachers and the society by technology-solutions.

Please kindly Grant permission for visit.

Thanking you.

Subject: Thanking letter.

Respected Sir,

We are very grateful for sparing your valuable time for guiding our Third Year students of Civil Engineering at your water treatment plant. This will definitely provide right path towards the goal. Your resourceful interaction with the Civil Engineering students will definitely prove increase in their Knowledge.

We thank you once again for your full co-operation. Look forward for more such interactions in future.

Thanking you.

Subject- Permission letter for Site Visit

Respected Sir,

As you know Site visits are the integral part of curriculum, I am writing this letter to you for getting your permission to conduct site visit under the subject of Applied Hydraulics of TE Civil (A & B) to Madhuban dam, Silvasa.

We are planning this site visit on 20 & 21 Sept 2019 with approx. 100 students and concern 4 teaching faculties.

Please give us permission and do the needful for the same.

Thank you in anticipation.

Yours faithfully,

Subject: Permission for visit of Retaining structure & Bridge Design.

Respected Sir,

We would hereby like to arrange an educational visit for our T.E.Civil Engineering student to **RETAINING STRUCTURE & BRIDGE DESIGN** at Indapur (NHAI) section NH-17 Panvel location to study various technical things of reinforcement details and construction of prestressed structure as per syllabus of TRPC & Geotechnical Engineering. The total number of students visiting the site will be 110 and they will be accompanied by 4 faculty.

Vishwaniketans is a public trust established by professionals drawn from the industry, education and administration with excellent experience in the respective fields. The campus has been located near Navi Mumbai, at Khalapur on Mumbai- Pune expressway. This has created platform for students, teachers, researchers and professionals to adopt excellent teaching – learning practices based on project Based Learning (PBL).This will encourage entrepreneurship and finally support product-development through start-ups and empower teachers and the society by technology-solutions.

Please kindly Grant permission for visit.

Thanking you.

Respected Sir,

We are very grateful for sparing your valuable time for guiding the Third year students of civil Engineering at your site. This will definitely provide right path towards the goal. Your resourceful interaction with the Civil Engineering students, on 8th Feb, 2018, will definitely prove valuable, in fulfilment in their Knowledge.

We thank you once again for your full co-operation. Look forward for more such interactions.

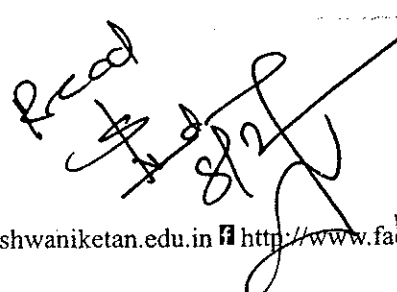

Thanking you.

Industrial Visit Feedback Form

(Please specify Industrial Visit information by descriptive statement, tables, sketches, figures i.e., add Extra sheet)

Name of Student **SHIVRAJ C CHAVAN**

Course and Branch **CIVIL ENGRG. / VIth sem.**

Roll No. **10. (B DIV)**

Name and Address of Industrial Visit Organization **VADKHAL - BRIDGE CONSTRUCTION SITE.**

1. State two important experiences that had been gained from the industrial Visit :

1. We had experienced good site knowledge about how actually construction site works.

2. Experienced about safety, detailing, How to read engineering drawing.

Overall good experience

2. Main problems encountered during the industrial Visit:

problem might had occur about safety, but it didn't. So, No any problem encountered.

3. How do you evaluate your overall training Visit?

Excellent

Satisfactory

Not satisfactory

4. Types of exposure given:

Area Interest	Please specified
Design	Detailing about reinforcement
Analysis	
Outdoor work	
Supervision	safety, work, done.
Administration	
Daily work	

Your satisfaction level after Industrial Visit (only tick): (5: highest; 1: lowest)

Lonavala.

Subject : Regarding Permission for site visit and Survey of Canal.

Respected Sir/Madam,

Vishwaniketan is a public trust established by professionals drawn from the industry, education and administration with excellent experience in the respective fields. The campus has been located near Navi Mumbai, at Khalapur on Mumbai- Pune expressway. This has created platform for students, teachers, researchers and professionals to adopt excellent teaching - learning practices based on project Based Learning (PBL). This will encourage entrepreneurship and finally support product-development through start-ups and empower teachers and the society by technology-solutions.

Under above vision we are committed to provide practical exposure to our students.

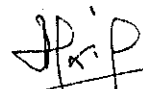

We would hereby like to request you to give permission to our Third year Civil Engineering Students for visit and survey of Valvan Dam, Lonavala, Pune. We have two divisions with strength of 60 each, hence we required two days for visit and survey. Any two dates between 15th and 16th March, 2018 are feasible to us. Please confirm any two dates. This visit and survey work surely will be beneficial to our students to increase their knowledge and to get practical approach of subject.

We will obliged if you help in this regards.

Thanking you.

EARTHEN DAM

Earthen dam is also called as embankment dam or earth fill dam. These dams are constructed with natural materials like clay, gravel, sand & silt. Earthen dams are constructed by compacting successive layer of earth, using the most impervious materials to form a core more permeable substances on upstream & downstream side. Dam is constructed nearly as trapezoidal cross section. Earthen dam resists the forces exerted upon it mainly due to shear strength of soil. Although the weight of the structure also helps resisting forces. Earth dams are built on any type of foundation.

MATERIALS FOR EARTHEN DAM:

Earthen dam requires large quantities of materials. Earthen dam can be designed to fulfill its functions satisfactorily with any type of material available. The following materials are commonly used for construction of earthen dams:

- Sandy materials
- Rock
- Clayed materials
- Sand
- Cement, steel, lime and other building materials are used in small quantities for construction of spillway, outlets etc.

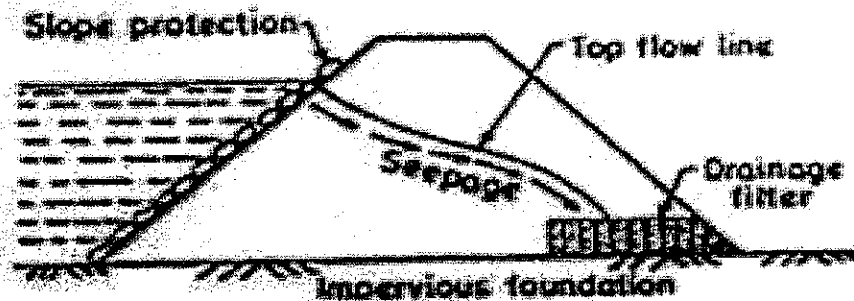

TRUE COPY

Vishwaniketan's (i MEET)

TYPES OF EARTHEN DAM:

1. HOMOGENEOUS EMBANKMENT TYPE:

A purely homogeneous type earth dam is composed of single kind of material. They are used only for low heights. A purely homogeneous section has been replaced by modified homogeneous section in which in drainage system in the form of horizontal drain filter is provided. This controls action of seepage so as to provide steeper slopes. These dams are composed of impervious or semi-impervious soils to provide an adequate

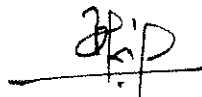

Homogeneous embankment provided with a drainage filter.

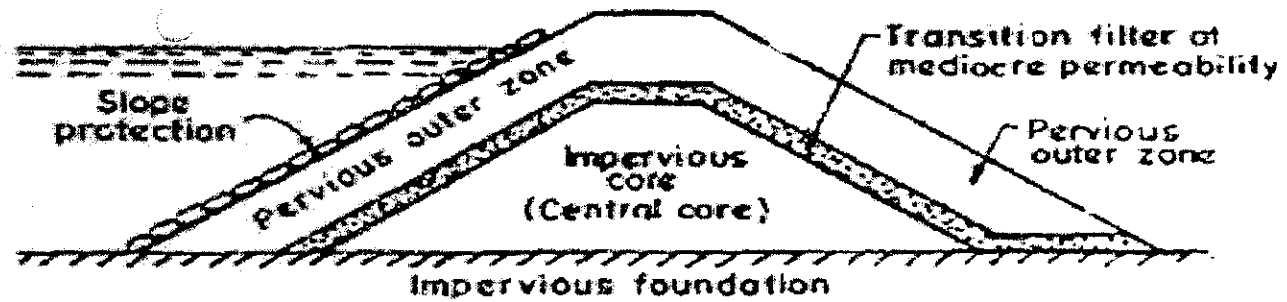

2. ZONED EMBANKMENT TYPE:

Zone embankment type earth dam is the one in which the dam is made up of more than one material. The dam is provided with a central impervious core, covered by a pervious transition zone. A suitable drainage system of horizontal drain or rock toe is also provided at downstream side. Outer shells are made of pervious, free draining materials. The shells give stability to the central impervious fill and at the same time distribute load over a larger area of foundation.

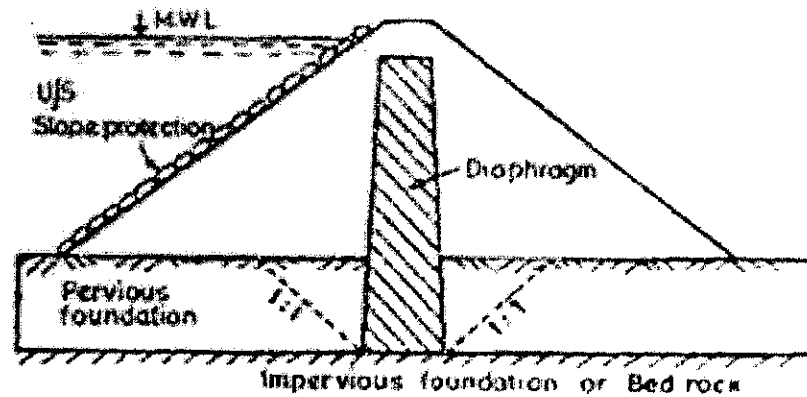

TRUE COPY

Principal
Vishwaniketan's (I) MEET

3. DIAPHRAGM EMBANKMENT TYPE:

In diaphragm embankment type, embankment is constructed of pervious material and thin diaphragm of impermeable material is provided to check the seepage. The diaphragm may be of impervious soil, cement concrete, bituminous concrete or any other material and may be placed either central vertical core

COMPONENT PARTS OF EARTHEN DAM:

1. **Hearing (core):** It forms the central impervious section built with clayey soil, silt loam, etc. It provides water tightness to the dam and adequate shear resistance against slipping. Controls s body of dam.
2. **Casing:** It forms outer portion of dam built with murum, soft rock or sand & gravel. It provides cover to th protecting it from cracking. Provide stability to dam.
3. **Cut-off trench:** It is excavated below ground level under the hearing zone & filled with clayey soil. Its function is to prevent seepage flow through pervious foundation. It prevents piping of c foundation.
4. **Rock toe:** It is constructed from rock pieces or boulders large than 20cm size. I helps to prevent sloughing of toe due to seepage flow.

TRUE COPY

[Signature]
Principal
Vishwaniketan's (i MEET)

CONDITIONS OF STABILITY OF EARTHEN DAM:

1. The dam should not be overtopped by flood water.
2. The seepage line should be within the downstream face of the dam.
3. The upstream and downstream face should be stable under worst conditions.
4. The foundation shear stresses should be within the safe limit.
5. There should be no opportunity for free flow of water from upstream to downstream.
6. The upstream slope should be protected from wave action.
7. The dam and foundation should be safe against piping.

GRAVITY DAM

A Gravity dam has been defined as a "structure which is designed in such a way that its own weight resists external forces". A gravity dam is a dam constructed from concrete or stone masonry and designed to hold back water by using only the weight of the material and its resistance against the foundation to oppose the horizontal pressure of water pushing against it.

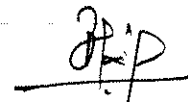

TYPES OF GRAVITY DAM:

Gravity dam are classified according to the material used for constructing them.

- 1. MASONRY DAM:** This type of dam is constructed with masonry which could be either of rubble or coursed masonry.
- 2. CONCRETE DAM:** They are constructed block by block by pouring good quality concrete

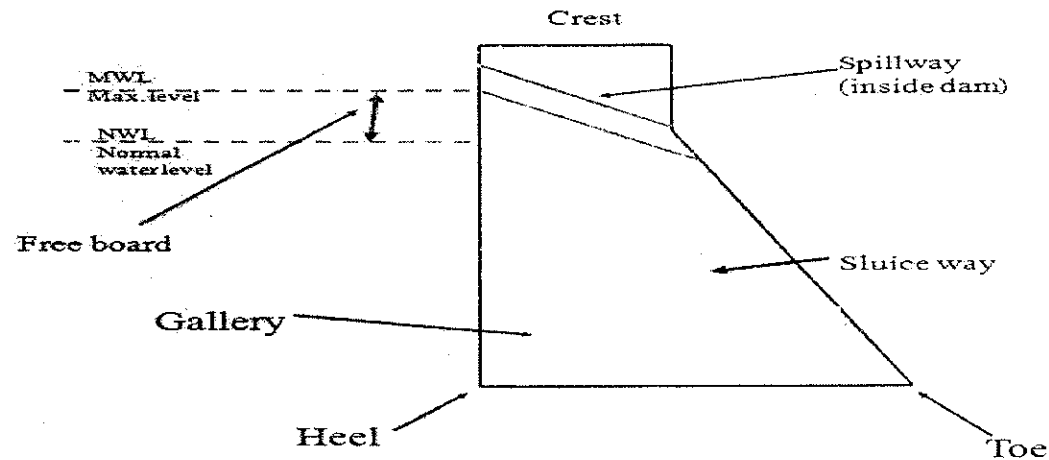

TRUE COPY

Principal

Vishwaniketan's (I) EET

COMPONENT PARTS OF GRAVITY DAM:

1. Heel-contact with the ground on the upstream side.
2. Toe-contact with the ground on the upstream side
3. Abutment-Sides of the valley on which the structure of the dam rest.
4. Galleries-small rooms like structure left within the dam for checking operations
5. Spillway-It is the arrangement near the top to release the excess water of the reservoir to downstream
6. Sluice Way-An opening in the dam near the ground level, which is used to clear the silt, accumulation reservoir side.
7. Divergen tunnel-Tunnels are constructed for diverting water before the construction of dam. This help the river bed dry.

ADVANCED CONSTRUCTION EQUIPMENT

INDUSTRIAL VISIT REPORT

Under the guidance of **Prof. Deepali Barad**

OBJECTIVE : Conducting an Industrial Visit on Advanced construction equipment.

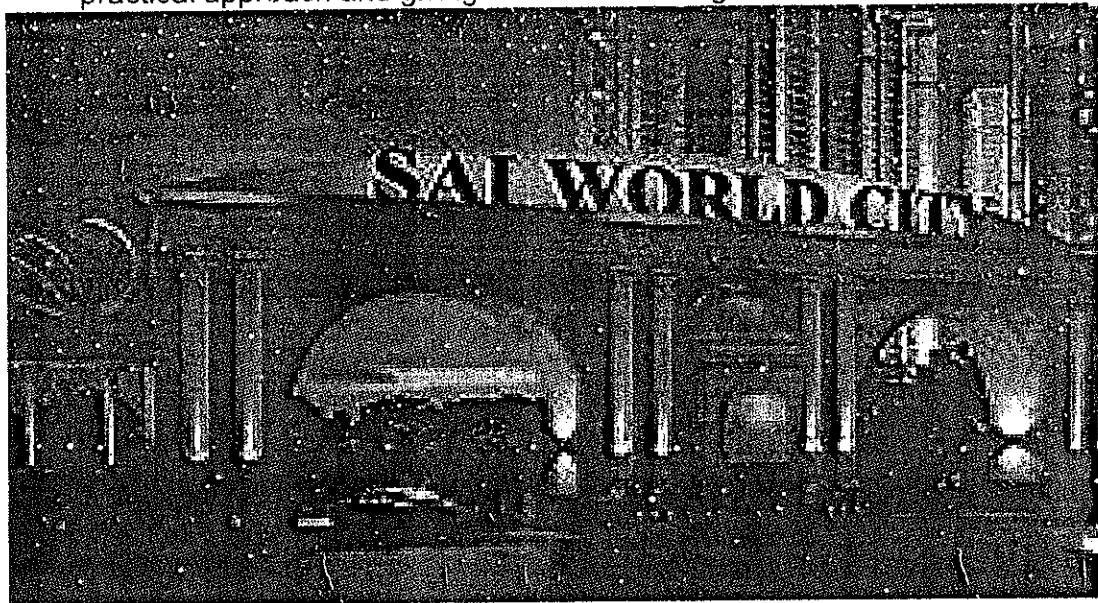

PROJECT OVERVIEW :

An industrial visit to the ongoing site of the Paradise Group "Sai World City " located near Palasphata on the old Mumbai-Pune highway .

It is a mega township with themed amenities spread over 42 acres of land constituting of 13 towers 42 Floors each. Each tower 2, 3, 4, BHK apartments.

PRACTICAL OBSERVATION :

Mugging up the things in classrooms is not the right way of studying. This bores the students. A practical approach and giving hands on learning makes life easier and

Mugging up the things in classrooms is not the right way of studying. This bores the students. A practical approach and giving hands on learning makes life easier and simpler. The purpose of the visit is to make us all accustomed to working on site in all conditions.

We reached the site at 9 am in the morning. After arriving there first we went to the lobby area where all the booking were going. There was a this proposed model that attracted everyones attention.

Vishwaniketan's (i MEET)

The supervisor of the site Mr. Anil Jadi headed us to the RMC plant. The plant was fully automatic working on weighing batch method. It has a capacity of mixing 0.5 m^3 concrete at a time and can mix $30 \text{ m}^3/\text{hr}$.

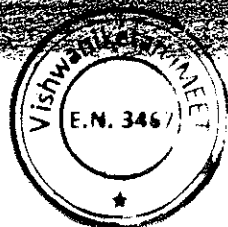

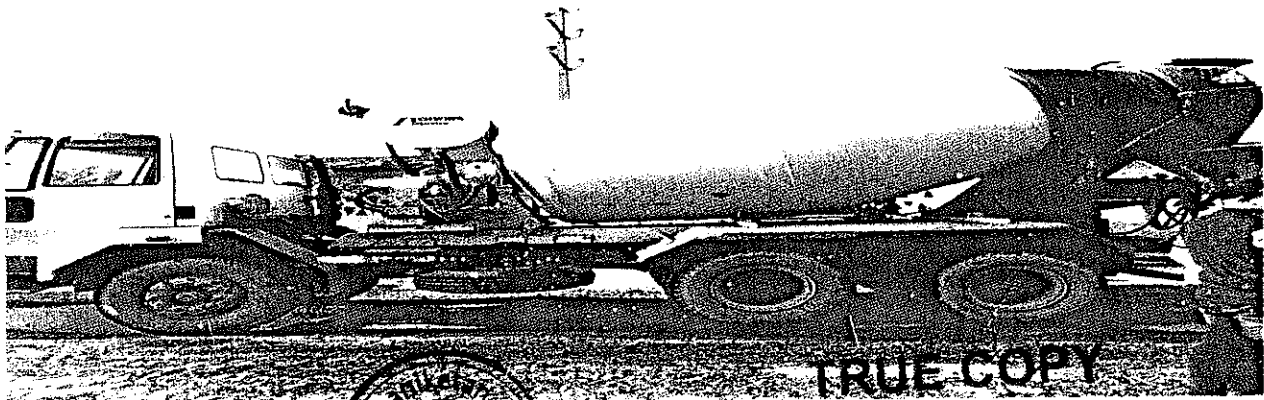

The plant has separate cement silos and GGBS silos stored. The operator gives the command from the operating room for the batch needed. The grade of concrete used on the site was M40. The RMC plant cancel out the use of the transit mixer which takes longer time to reach to the site RMC hence is useful in this condition. Batch plants combine a precise amount of rock, sand, water and cement together by weight, allowing specialty concrete mixtures to be developed and implemented on construction sites.

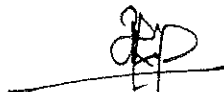

The someof the Construtions equipments we saw at the site are:

Transit Mixer is a piece of equipment that is used for transporting concrete and mortar or ready mix material from a concrete batching plant. This Mixer is a strong well designed piece of equipment meant for transporting concrete from plant directly to the place where it is to be poured.

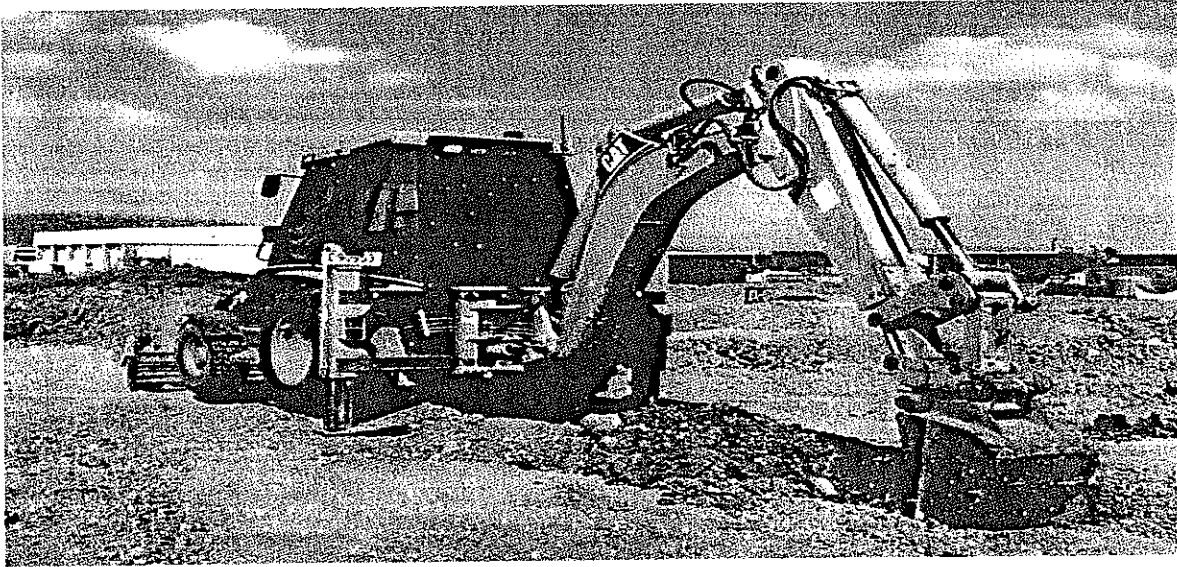

Conmix Mixers are fitted with a water pump of 400 Ltrs/min. capacity at 3.5 bar pressure. A water tank of capacity 600 Ltrs with a water level indicator is supplied along with the mixer. An oil cooler has been provided in the system for efficient and trouble free working of the mixer.

A **Backhoe** is a type of excavating equipment, or digger consisting of a digging bucket on the end of a two-part articulated arm. It is typically mounted on the back of a tractor or front loader the latter forming a backhoe loader. The section of the arm closest to the vehicle is known as the boom while the section which carries the bucket is known as the dipper (or dipper-stick), both terms derived from steam shovels. The boom is generally attached to the vehicle through a pivot known as the king-post, which allows the arm to pivot left and right, usually through a total of 180 to 200 degrees.

A **Power shovel** is a bucket-equipped machine, usually electrically powered, used for digging and loading earth or fragmented rock and for mineral extraction. Power Shovels are a type of rope/cable excavator, where the digging arm is controlled and powered by winches and steel ropes, rather than hydraulics like in the more common hydraulic excavators. Basics parts of power shovel including the track system, cabin, cables, rack, stick, boom foot-pin, saddle block, boom, boom point sheaves, and bucket. The size of bucket varies from 0.375cu m to 5cu m.

J.P.P.
Principal
Vishwaniketan's (I MEET)

CONCLUSION :

The industrial visit was very helpful and educational for all the students as it showed in a practical way the arrangement of various components and equipment on which makes the construction easier. The students were glad to know all of the things learned in classroom on a practical basis.
